Instructions:

Using Packet Tracer software version 8.1.1.0022, recreate the Final Project according to the following requirements:

Final Project V1.0

1).- The network scenario must be considered minimum fifteen end devices kinds per Local Area Network (LAN).

End-Devices

Home

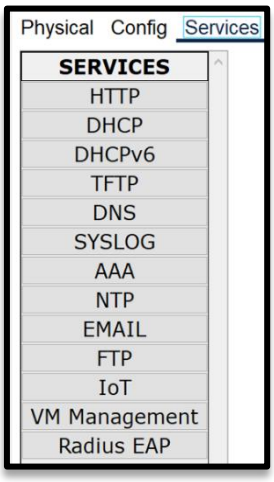

Smart city

2).- The network scenario must be considered minimum five services per Local Area Network (LAN).

Services

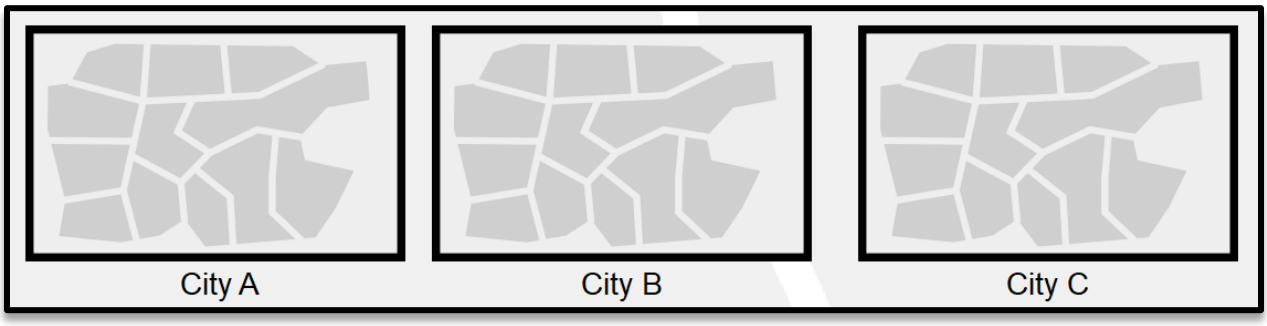

3).- The network scenario must be considered minimum three Board components per Local Area Network (LAN).

Board Componet

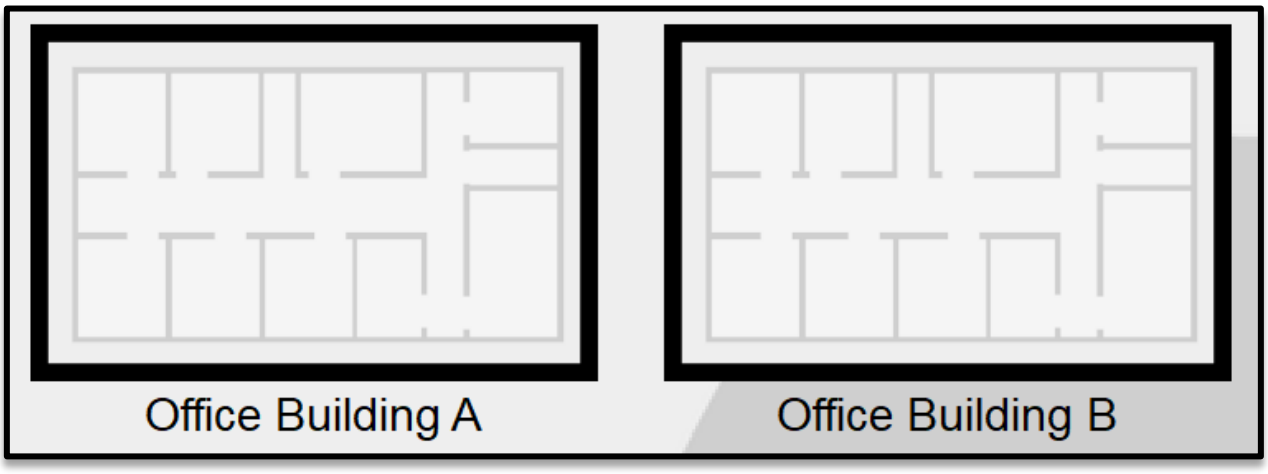

4).- The network scenario must be connect three WAN located in different cities by Frame Relay. whichone works with two building in two different LAN. The Network scenario must develop in logical and physical environment.

Cities

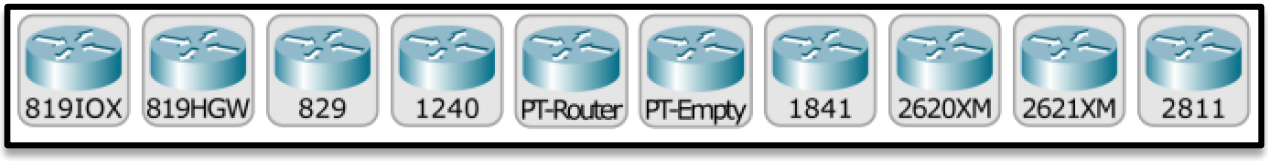

Office Building

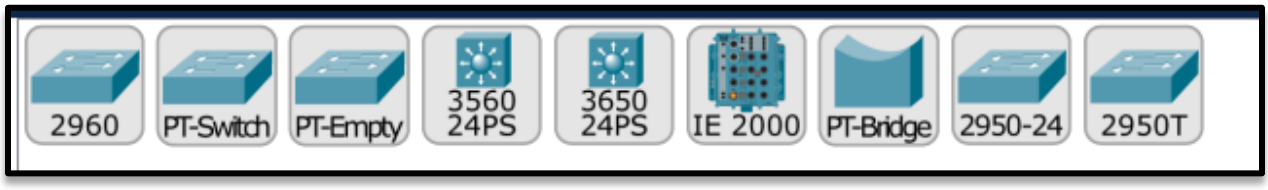

Use borders and core routers/switches, to apply scalability, Reliability, and security in the networks.

Routers

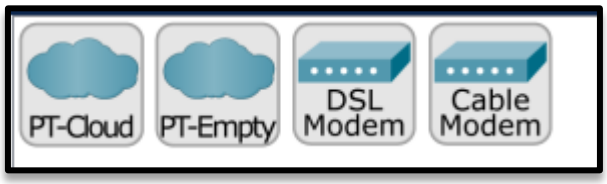

Switches

Security Appliance

Frame relay

4).- Use DHCP and Static IP to segment the network. and Testing all component in the network.
